Cockroaches, spiders, termites & rodents, can all cause inconvenience to you the home owner, and not all Pest Control companies take the care needed to effectively get rid of them. EC Morelli are your competent professionals.

## Kordon Termite Barrier (Kordon TB)

Kordon TB is a flexible termite protection system that offers guaranteed termite protection, when installed in conjunction with a concrete slab poured to AS 2870. Kordon TB can be installed as a perimeter termite barrier to all building types such as in-fill slabs, waffle pods, slab edge rebates or bearer and joist construction. Kordon TB can also be installed as a termite protection system for pipes and penetrations. For more details visit [www.kordontmb.com.au](http://www.kordontmb.com.au)

Kordon Termite Moisture Barriers

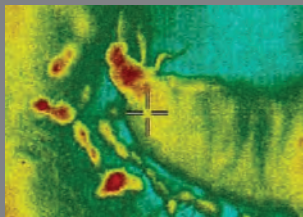

## Altis Pre-construction/Post-Construction Reticulation Systems.

are generally installed around structures to prevent ingress of termites. The system is a poly pipe below ground level which is pressurized with termiticide through control boxes mounted inconspicuously around the structures perimeter. These systems are ideal as once they are installed, they can be maintained by our inspectors at 3-5 years intervals without any further excavation or disturbance to the structures surroundings. All work is carried out to the current Australian Standards A.S 3660-1993 and Work Cover guidelines to ensure the treatment is safe and effective. For more details visit [www.altis.net.au](http://www.altis.net.au)

## TermicamNSW

Detect termites by using state-of-the-art thermal imaging that is fast, effective and reliable. After years of research, Termicam from Australia has developed a scientific answer to termite detection. For more details visit [www.termicam.com](http://www.termicam.com)

Termicam Thermal Imaging Termite Detection.

We can carry out all types of pest control; Pre-Construction Termite Management Systems, Pre-Construction/Post Construction Reticulation Systems, Termite Monitoring/ Baiting Systems, General Pest Control and Subfloor Ventilation.

## Exterra Termite Interception and Baiting System

The Exterra Termite Interception and Baiting System is a systematic, multi-step termite management method. Australian field trials have clearly demonstrated the effectiveness of the system in controlling subterranean termites in Australia.

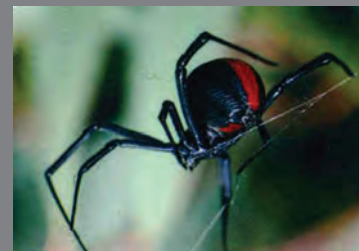

Exterra Termite Interception or Baiting System

Exterra's greatest advantage compared to chemical barriers is its ability to eliminate the actual source of your termite problem - the termite colony itself. For more information visit [www.exterra.com.au](http://www.exterra.com.au)

## Urban Pest Treatments

Urban Pest Treatments - covers ants, cockroaches, silverfish and spiders which may be evident to the dwelling and outbuildings. Our operator will spray external areas of the property, including garage/s, outbuildings, roof voids, subfloors and all internal areas at clients discretion to gain control over these annoying pests.

Eradication of termites using approved chemical treatments can also be carried out. For more information visit [www.ecmorelli.com.au](http://www.ecmorelli.com.au)
